OUR MISSION

INNOVATING BY SYMPLIFYING

Telecom & Security Srl is an Italian company producing accessories for telecommunication systems, founded in 1993. It was born from the experience of its parent company, **FAIT Srl**, created in 1953 by Giorgio Pugliese, father of Giovanni who is actually the CEO of both companies.

In our factory near Pescara (Italy) we **design and develop products for coaxial and optical fiber connectivity**, with the aim of bringing innovative and useful solutions to the market, aimed at installers of technological systems.

Telecom & Security Coaxial Solutions

With the conviction of offering increasingly innovative and at the same time easily accessible and manageable solutions, **CaP Connettore a Pressione – Pressure Connector** is born.

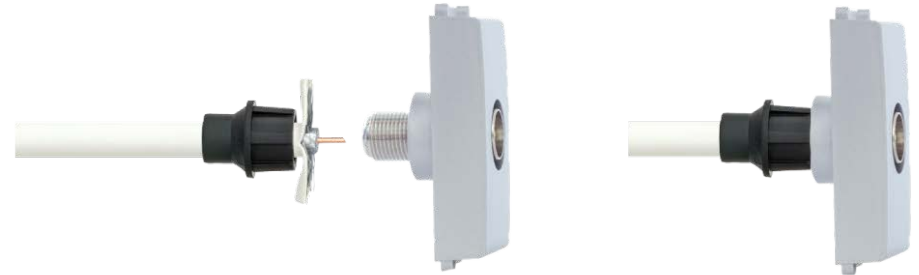

The **CaP**, patented heart of the CaP System, is a revolutionary non-metallic F male connector designed to make any coaxial termination simple, fast and reliable.

Thanks to **CaP**, installers can make any coaxial connection with any type of coaxial cable, from microcoax to RG6 quad, in seconds and with the highest quality .

CaP has been awarded 'Best of CES' at the 2001 edition of Consumer Electronics Show in Las Vegas.

Telecom & Security Fiber Optic Solutions

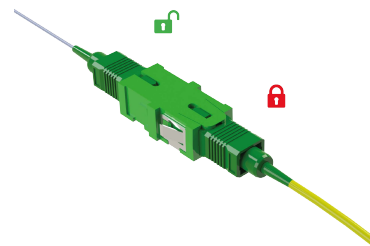

Telecom & Security recently presented **Easy FTTH**, 4 innovative patented solutions to drastically facilitate FTTH installations while maintaining the best possible quality results

Easy Fiber: fiber optic patch cord pre-connectorized in factory with the sole ferrule installed and polished; the SC/APC connector is completed in the field, after the patch cord installation, in a few seconds without using any tool or any in depth training. The cable keeps minimum dimensions and can be therefore easily installed in small ducts.

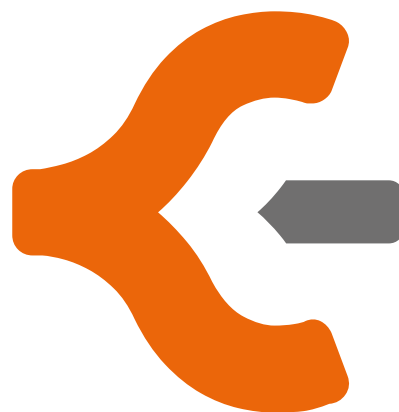

Easy Link: universal wall-mounted optical box to be installed on existing sockets, even completely occupied by other services, without doing masonry works. Easy Link has been chosen by Telecom Italia as their FTTH socket to be installed in all Italian homes.

Easy Lock: SC/APC adapter with safety lock system to avoid unwanted disconnections of any standard SC connector. This solution, useful in situations where it is important to maintain a stable connection, has been presented to the IEC General Meeting and it is becoming a new international technical standard.

Easy Key: 40° angled SC/APC adapter in keystone configuration with Easy Lock safety system, to have an optical FTTH socket mountable in any keystone receptacle.
